

Tips

Faces are not automatically assigned

The procedure applies to the following situation: You receive many suggestions for a person and are surprised that they are not automatically assigned, although they are quite clear. The cause will be that the automatic system cannot make out a clear person. e.g. with family members, blurred shots or by incorrectly assigned faces.

The setting for Face Recognition > **Automatic Assign** is mainly decisive. You can find out what the impact of a change is here: [Increase detection](#)

Automatic assignment is only done from a high probability of matching. To see the likelihood of face suggestions, turn on **Settings > Detection > Show details and markers**.

Tips

Tips

Finding incorrect assignments

Check the people and the associated faces under **Label > people**.

It is possible that a face has been assigned to the wrong person, thus preventing the clear assignment of faces to a person.

You may be able to spot incorrect associations if you open into a person with good suggestions and then check the suggestions as follows:

- **Right-click** a high-value suggestion.
- Check the people whose name is suggested to see if a wrong face has been assigned there.

In the **example**, the face suggestion for Luisa Schneider is also recommended for Sabrina Müller. Therefore, check whether faces of Luisa Schneider have been assigned to Sabrina Müller and correct this if necessary.
